Louisiana \$2.25	Mississippi \$2.35
South Texas \$2.25	Crude Creek \$2.35
South Texas \$2.85	Big Muddy \$2.35

**Guy Harwell Is Dead**

Guy Harwell, who has been here presenting the Mo. Man Oil company to the public, died Saturday morning at his home in Tulsa, after a severe illness on account of the heat.

Mr. Harwell, who was a lawyer by profession and who is a brother of P. Harwell, the well known oil man, formerly with the Mo. Man Oil company, lived with his wife and family in a beautiful home on Maple Ridge in Tulsa, and would have been thought the last man to be near death because of his robust physique. He was the picture of health when here last.

He was one of the men who helped to lay the modern rate and legal up to his credit in his early life. He fulfilled every duty to his family and the community at large and will be greatly missed by all Tulsa friends and associates in Tulsa.

Funeral arrangements have not yet been made, but it is expected that the services will be held at the First Methodist Church on Thursday afternoon.

The services will be conducted by Rev. W. A. Black, pastor of the First Methodist Church.

There will be the usual big crowd at Pawhuska Friday and Saturday, according to the latest reports, and from present appearances there is going to be some blood with plenty of capital among the purchasers.

The arrangement to buy out of the oil interests in the state at this time, the ownership of the entire company is extended to his wife and family.

**The Osage Sale**

There will be the usual big crowd at Pawhuska Friday and Saturday, according to the latest reports, and from present appearances there is going to be some blood with plenty of capital among the purchasers.

The new Osage regulations as regards oil and gas as printed in Monday morning's World have not changed matters to speak of and are fairly satisfactory to the bunch, except that there are a few new provisions that have been added by the department that have only a tendency to confuse the situation.

It will doubtless be true that if it is difficult for any of the new men who are going to be able to get a line on more than two or three pieces of land, they will have to go to him on any other offer that are available.

The new Osage regulations as regards oil and gas as printed in Monday morning's World have not changed matters to speak of and are fairly satisfactory to the bunch, except that there are a few new provisions that have been added by the department that have only a tendency to confuse the situation.

The men who buy on acreage in this sale probably will not be too anxious for their money to be had in the great state sales of Texas to the south of us, and be much nearer producing wells. There is, besides, a most interesting performance for the man that never saw an Osage sale and it will be well worth visiting by the greatest number of easterners who are in Tulsa today.

Pawhuska is a beautiful little city and is well worth a visit. It is gay with the blankets of the Osages, the most picturesque as well as the richest tribe of Indians in the world.

**Sapulpa Refining Company Is Agreed**

An alleged newspaper in Tulsa published a story recently affecting the honor and integrity of the Sapulpa Refining company, which promises that it is going to show the editor the time of his young life and in the meantime makes the following statement:

"On Monday, May 24, the Humble Pipe Line company called the office of the Sapulpa Refining company in Sapulpa on long distance telephone and asked us to take 14 cars of crude which were consigned and shipped to the order of D. C. Dunn, now with Duluth Refining company, and apply them on a contract.

The new oil company is drilling in the northwest corner of section 12, 24, 2, which is northwest of the Fitzpatrick well, about three miles.

Mack and Wentz are drilling in the northwest corner of section 12, 24, 2, which is northwest of the Fitzpatrick well, about three miles.

**At Billings**

The Humphreys Petroleum company has completed a 100-foot well and is ready to drill again at 450 feet on its deep test in the Fitzpatrick farm in section 24, 24, 2. This is the deepest test in the western country.

Mack and Wentz are drilling in the northwest corner of section 12, 24, 2, which is northwest of the Fitzpatrick well, about three miles.

**At Camden, Arkansas**

The Humphreys Petroleum company is drilling at 3,160 feet near Camden, Ark., and the country around there looks much like an oil country at any part of the state.

A well-known authority states that stomach trouble and indigestion are nearly always due to acidity of the stomach and not, as most folks believe, from a lack of digestive juices. He states that an excess of hydrochloric acid in the stomach retards digestion and starts food fermentation; then our meals look like garbage in a can, forming acid ulcers and gases which irritate the stomach like a hot balloon. We then get that heavy, uncomfortable feeling. The best way to neutralize sour food, rich gas or have heartburn, flatulence, water brash, or nausea.

He tells us "In fact, some all-digestive salts and acids get from any pharmacy four ounces of salt, Salsal and take a tablespoonful in a glass of water before meals, and while it is effective and comforting, it further continues this for one week. When relief follows the first dose, it is important to neutralize the acidity, remove the gas-making mass, start the liver, stimulate the kidneys and thus promote a free flow of pure digests."

This salt is inexpensive, and is made from the acids of grapes and lemon juice combined with calcium and sodium phosphate. This becomes salt and is used by thousands of people for stomach trouble with excellent results—Adv.
